

XPS™ Cross-Carrier Packing and Shipping

XPS is the Only End-to-End Shipping Solution Built Exclusively for SAP®

In the past, Parcel and LTL shipping choices were limited to carrier-supplied software and shipping stations, third party bolt-on applications, or manual processes. Today, users are operating in a multi-carrier world, with many choices for carrier options. XPS is a global solution that delivers end-to-end parcel shipping and manifesting functionality that unifies processes across carriers and empowers users to increase efficiency, improve customer service, enhance visibility and maximize ROI.

Comprehensive

Designed completely within SAP®'s ECC, S/4HANA, EWM and TM environments, XPS provides SAP users the ability to route, pack, ship and manifest deliveries – all from within their existing SAP landscape. Leveraging the SAP ecosystem, XPS software spans every part of the shipping and manifesting process.

SAP® technology, combined with XPS's architectural framework, allows for easy integration to external devices such as fixed-mount scanners, conveyor systems, scales, dimensionalizers and label applicators.

Key Benefits

- Simplify, streamline and automate the packing and shipping process
- Achieve comprehensive visibility across carriers
- Supports 200+ carriers globally
- Tailor processes to your business rules
- Centrally manage installation, maintenance and upgrades
- Leverage strong partnerships with SAP and leading WM, EWM and TM consulting organizations
- Support business growth and onboard new sites quickly

Core Functionality

- Intuitive and flexible packing UI
- Carrier compliance documents including shipping labels, manifests and export documents
- Integrated shipping data within SAP®
- 100% parcel and LTL carrier compliant
- Full access to SAP® data and configuration
- Track and trace capability including POD signature image
- Freight audit
- Custom email alerts

Visibility

XPS eliminates bottlenecks and improves customer service by enabling end users to access accurate freight estimates and order information throughout the entire shipping process. As a result, they can proactively address late deliveries and send customized emails to end customers, internal sales teams and logistics coordinators.

Flexibility

As the integration point between your SAP® system and carrier systems, XPS leverages SAP data to create and coordinate messages across multiple parcel, regional and LTL carriers. This synergistic process generates the necessary shipping documents and labels while storing critical shipping data in your SAP system.

XPS users can rely on a single, unified interface regardless of location, destination, carrier or mode—virtually eliminating the complexity of cross-carrier integration. As a result, users can deploy to additional sites quickly and seamlessly.

Value

XPS delivers value throughout the outbound packing and shipping process in both improved operational efficiencies and cost reduction. Internal efficiencies can be realized by reducing bottlenecks, increasing throughput, providing the exact same process for the end user regardless of the carrier or service and making the tracking information available from within SAP. From a customer service perspective, improvements can be seen in providing freight estimates at the time of order, address validation, custom email alerts and POD with signature image visibility in SAP.

Cost Savings

Freight cost reductions can be realized from rate shopping, by carrier and mode. XPS supports days in transit calculations for comparisons between ground or air, Parcel or LTL or simply rate shopping across carriers. The solution also includes customizable routing guides to help ensure the optimal cost and service level for each shipment as well as freight invoice auditing and on time carrier reports.

“SCT’s XPS shipping solution gave us an ROI of 100K in just three months!”

— Paul Gall, Corporate Director of Logistics, **VIRCO**

About SCT Software

SCT Software is a leading provider of innovative logistics execution software servicing the SAP® user community. SCT software solutions are used globally by manufacturers and distributors to streamline the logistics process. The company’s products give customers increased visibility ensuring supply chain efficiency. Using SCT solutions, customers gain a competitive edge by reducing overall operational cost, improving customer service levels and increasing profitability. Focused exclusively on complimenting SAP® logistics capabilities, SCT solutions enable customers to leverage the investment in their SAP® landscape while providing best-of-breed functionality.
