xTRACK™ Global Supply Chain Visibility

Cloud-based Carrier Integration platform for Global Tracking

In the world of high-volume shipping, organizations must manage an increasingly complex array of variables for a greater number of shipments than ever. In order to manage today's shipping demands, companies must achieve universal, real-time visibility and traceability. xTRACK provides integration to any carrier and mode to enable end-to-end visibility for any shipment, anywhere in the supply chain.

Visibility

xTRACK eliminates inefficient or manual systems and incomplete data, giving organizations comprehensive access to high-velocity shipping data that is integral to making more proactive supply chain decisions. When combined with SAP® Business Network for Logistics and Global Track and Trace (BN4L-GTT), xTRACK brings a new level of visibility to shipments from dock to customer door by providing any tracking status for every shipment.

Traceability

Today's global shipping landscape is marked by a complex and diverse set of variables for each and every shipment in the supply chain. xTRACK provides native integration to any carrier and provides the tracking statuses to SAP® BN4L-GTT. This enables BN-GTT to provide robust analytics and visualization of the extended supply chain allowing for true supply chain management.

Key Benefits

- Empower end-to-end traceability of shipments throughout the supply chain

- Improve customer service and business outcomes by making proactive, data-driven decisions

- Provides the carrier tracking statuses to SAP® BN4L-GTT needed to provide the full value of visibility

- Increase data accessibility for all stakeholders

Core Functionality

- xTRACK provides integration to 150+ global carriers

- Seamless integration with business intelligence and visibility tools
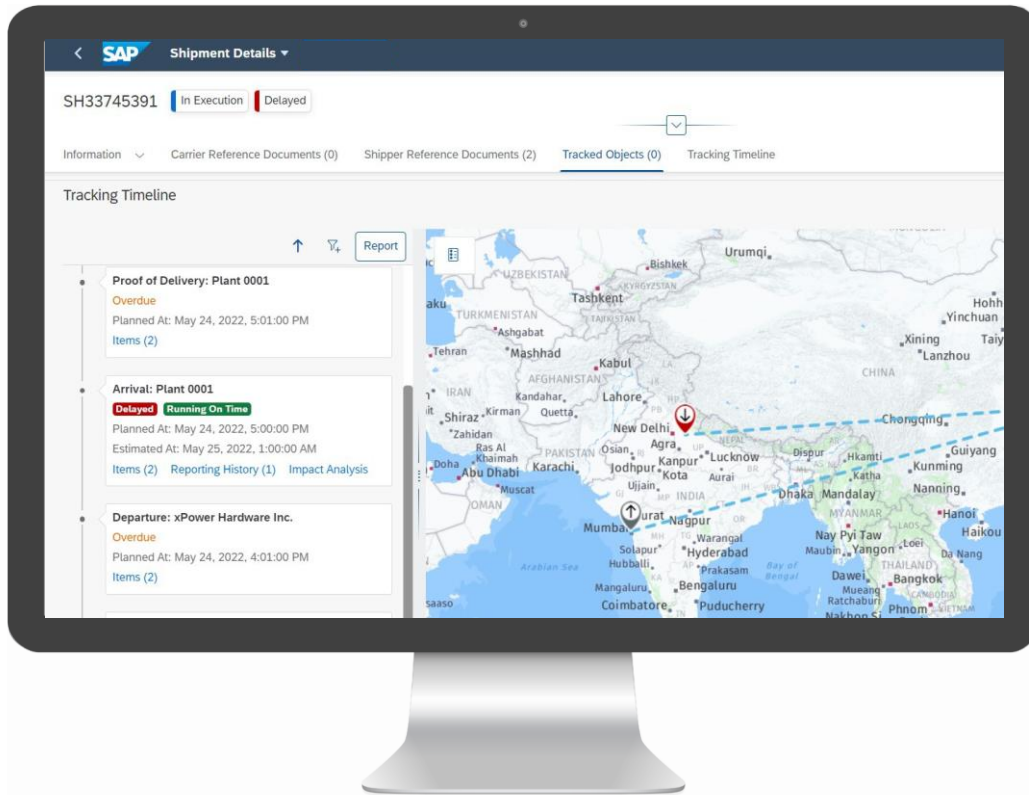

- Scalable platform for global, high-volume shippers

- SAP® Endorsed App, built on SAP Business Technology Platform (BTP)

Value

xTRACK integrates with over 150 global carriers with more being added every month. When using supply chain collaboration platforms such as SAP® Business Network for Logistics, you no longer need to onboard carriers as xTRACK automatically provides access to our integrated carriers using the standard APIs. This provides the data needed (carrier statuses) for BN4L-GTT to provide the insight to action for order fulfillment and goods in transit.

About SCT Software

SCT Software is a leading provider of innovative logistics execution software servicing the SAP® user community. SCT software solutions are used globally by manufacturers and distributors to streamline the logistics process. The company's products give customers increased visibility ensuring supply chain efficiency. Using SCT solutions, customers gain a competitive edge by reducing overall operational cost, improving customer service levels and increasing profitability. Focused exclusively on complimenting SAP logistics capabilities, SCT solutions enable customers to leverage the investment in their SAP landscape while providing best-of-breed functionality.
