

pXPS

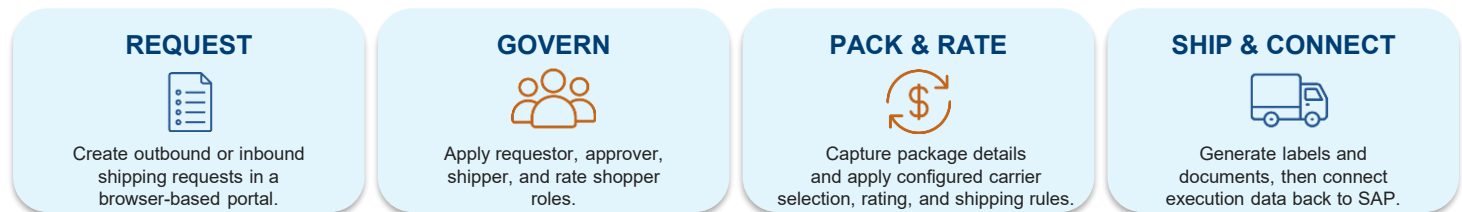

Portal-Based Packing & Shipping for SAP Logistics

SAP shipping execution beyond SAP users

pXPS extends SAP-aligned packing and shipping processes to non-SAP users, suppliers, mail rooms, and decentralized shipping locations through a browser-based portal. Users can request, approve, pack, rate, ship, label, and track shipments without navigating multiple carrier websites or working directly in SAP.

From Decentralized Shipping Requests to SAP-Aligned Execution

Business Outcomes

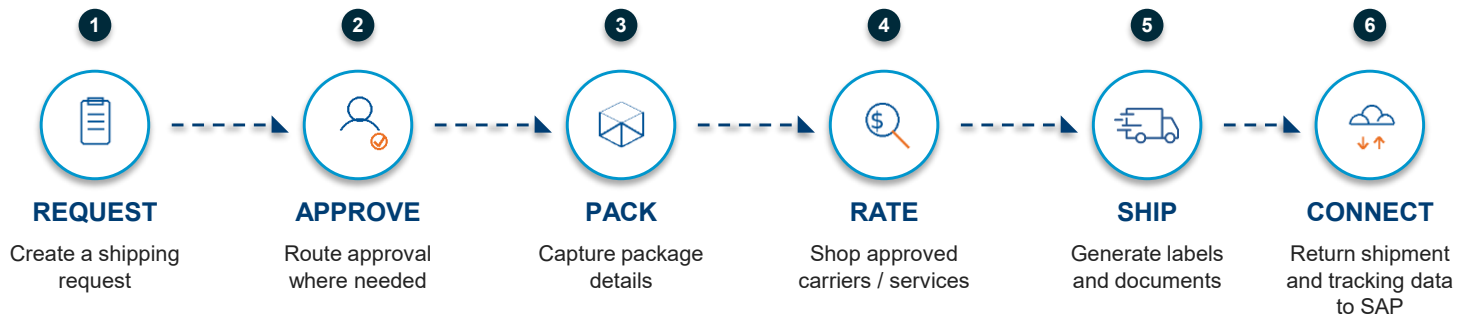

- ✓ Extend SAP shipping to non-SAP users, suppliers, mail rooms, and partners
- ✓ Replace fragmented carrier website usage with one controlled portal
- ✓ Improve data quality with profiles and SAP reference integration
- ✓ Standardize inbound and outbound shipping across decentralized users
- ✓ Enforce business rules and approved carrier choices
- ✓ Keep shipment data connected to SAP for reporting and control

Portal-Based Shipping Coverage

- › Non-SAP outbound shipping
- › Supplier and third-party inbound shipping
- › Mail room and service shipping
- › Parcel and LTL shipping with SAP-side execution logic
- › Browser-based access across decentralized users
- › Aligned to SAP master data and business rules

One portal experience for controlled shipping beyond SAP users.

How pXPS Works

BROWSER-BASED SHIPPING EXECUTION

- Create and process shipping requests outside of SAP
- Support ad-hoc outbound shipping
- Support inbound supplier and third-party shipping
- One portal for request, pack, rate, label, and track

ROLE-BASED PROCESS GOVERNANCE

- Requestor, Approver, Shipper, and Rate Shopper roles
- Configurable user experience aligned to business rules
- Personal user profiles and saved preferences
- Separate request creation from shipment processing

SAP EXECUTION LAYER

- Purchase Order integration for inbound shipping
- Packing materials and shipping stations
- SCT carrier selection, rating and routing logic
- Tracking and reporting-ready data aligned to SAP

CORE VALUE

pXPS gives non-SAP users one browser-based portal for controlled shipping execution. Users can request, approve, pack, select services, label, and ship while keeping shipment data aligned to SAP.

For customers already using XPS, pXPS extends existing rating, routing, and business rules to decentralized users through the portal.

BUILT ON SAP BUSINESS TECHNOLOGY PLATFORM (BTP)

- Clean core aligned extension
- Browser-based portal for decentralized users
- SAP-side carrier execution logic
- Scalable to support global shipping processes

Real-World Use Cases

Non-SAP Outbound Shipping — Enable office, service, and mail room users to ship without SAP access.

Supplier / Inbound Shipping — Allow suppliers or third parties to create inbound shipments tied to Purchase Orders.

Controlled Ad-Hoc Shipping — Standardize one-off shipping activity in a governed portal.

Distributed Shipping Governance — Apply consistent roles, approvals, and carrier choices across locations.

About SCT Software

SCT Software delivers SAP-centric logistics solutions that extend SAP Transportation Management, SAP Extended Warehouse Management, SAP S/4HANA, and SAP Business Network with advanced cartonization, multi-carrier shipping, visibility, and carrier integration solutions. SCT is an SAP Endorsed App partner with Premium Certified integrations, with solutions built on SAP Business Technology Platform.

SCT Solutions Include:

- › CSO – Advanced Cartonization
- › XPS – Multi-Carrier Packing and Shipping
- › XPS for LGM – Execution for SAP Logistics Management
- › pXPS – Portal Solution for Shipping
- › xTRACK – Multi-Modal Visibility and Parcel Invoice Integration
