# xTrack™ Global Logistics Intelligence

*Cloud-based Intelligence & Analytics, Blockchain-Ready*

In the world of high-volume shipping, organizations must manage an increasingly complex array of variables for a greater number of shipments than ever. In order to manage today's shipping demands, shippers must achieve universal, real-time visibility and traceability into each shipment's unique data set from wherever they are. As a Cloud-based, Blockchain-ready solution for global shipping intelligence, xTrack pairs big data, advanced analytics, and an intuitive Web-based interface to enable end-to-end visibility for any shipment, anywhere in the supply chain.

## Visibility

xTrack eliminates inefficient paper systems and incomplete data, giving shippers comprehensive access to high-velocity shipping data that is integral to making more proactive supply chain decisions. Working in partnership with Blockchain technology, xTrack brings a new level of visibility to your existing SAP shipping evnironment by tracking every shipment in your supply chain in real-time.

## Traceability

Today's global shipping landscape is marked by a complex and diverse set of variables for each and every shipment in the supply chain. With xTrack, any involved party can trace the path of any given parcel to its end destination through one simple and easy to use interface. Parcel data is stored in a secure and incorruptible ledger that can be simultaneously updated for multiple locations and parcels at once, empowering high-volume shippers to achieve universal supply chain traceability and transparency.

## Key Benefits

- Empower end-to-end traceability of shipments throughout the supply chain
- Improve customer service and business outcomes by making proactive, data-driven decisions
- Ensure transparency and support compliance through one, incorruptable ledger
- Increase data accessibility for all stakeholders, including shippers, carriers, and end customers
- Maximize scalability through global, Blockchain-ready logistics intelligence

## Core Functionality

- Comprehensive shipping data from order to delivery
- Real-time calculations for shipping KPIs
- Seamless integration with Blockchain technology
- Intuitive tracking interface and analytics dashboard
- Scalable platform for global, high-volume shippers
- Highly secure data encryption
- Built entirely in SAP® using standard tools and framework
- Integration with standard SAP® transactions

## Value

In the logistics space, knowledge is power. By unleashing secure, high-quality intelligence for the world's highest-volume shipping operations, xTrack powers new efficiencies and better customer service in a highly scalable way. The data provided by xTrack empowers supply chain leaders to dynamically measure shipping performance and proactively identify and manage problem areas before they can negatively impact customer satisfaction. Positive business outcomes include reduced shipping and operational costs and increased revenue through long-term customer loyalty.

## Accessibility

As a Cloud-based solution, xTrack empowers identified users to access consistent, complete data from any device, at any time. With an intuitive user interface, xTrack makes it easy for shippers to understand the overall status of their shipping landscape at-a-glance, then drill down deeper to isolate areas of additional interest. Through robust data analytics, xTrack also calculates a variety of shipping KPIs in real-time to identify areas of strength and opportunities for improvement.

## About SCT Software

SCT Software is a leading provider of innovative logistics execution software servicing the SAP® user community. SCT software solutions are used globally by manufacturers and distributors to streamline the logistics process. The company's products give customers increased visibility ensuring supply chain efficiency. Using SCT solutions, customers gain a competitive edge by reducing overall operational cost, improving customer service levels, and increasing profitability. Focused exclusively on complementing SAP® logistics capabilities, SCT solutions enable customers to leverage the investment in their SAP® landscape while providing best-of-breed functionality.
