

XPS™ Multi-Carrier Packing and Shipping

Built Exclusively for SAP

In the past, Parcel and LTL shipping choices were limited to carrier-supplied software and shipping stations, third party bolt-on applications, or manual processes. Today, users are operating in a multi-carrier world, with many choices for carrier options. XPS is a global solution that delivers end-to-end parcel shipping and manifesting functionality as a natural extension of your SAP® landscape. XPS seamlessly unifies processes across carriers and empowers users to increase efficiency, improve customer service, enhance visibility and maximize ROI.

Comprehensiveness

Designed to work as a natural extension of your existing SAP environment, XPS provides SAP users the ability to route, pack, ship and manifest deliveries—all from within your SAP landscape. Leveraging the SAP ecosystem, XPS software spans every part of the shipping and manifesting process.

SAP technology, combined with XPS's architectural framework, allows for easy integration to external devices such as fixed-mount scanners, conveyer systems, scales, dimensionalizers and label applicators.

Key Benefits

- Simplify, streamline and automate the packing and shipping process
- Achieve comprehensive visibility across carriers
- Support, 200+ carriers globally
- Tailor processes to your business rules
- Centrally manage installation, maintenance and upgrades
- Leverage strong partnerships with SAP
- Support business growth and onboard new sites quickly

Core Functionality

- Intuitive and flexible packing UI
- Carrier compliance documents including shipping labels, manifests and export documents
- Fully aligned with your SAP® landscape
- Integrated shipping data within SAP
- 100% parcel and LTL carrier compliant
- Full access to SAP data and configuration
- Track and trace capability including POD signature image
- Freight cost comparison
- Custom email alerts

Flexibility

As the integration point between your SAP® landscape and carrier systems, XPS leverages SAP data to create and coordinate messages across multiple parcel, regional and LTL carriers. This synergistic process generates the necessary shipping documents and labels while storing critical shipping data in your SAP system and empowering you to access it at any time, from any device.

XPS users can rely on a single, unified interface regardless of location, destination, carrier or mode—virtually eliminating the complexity of multi-carrier integration. As a result, users can deploy to additional sites quickly and seamlessly.

Visibility

XPS eliminates bottlenecks and improves customer service by enabling end users to access accurate freight estimates and order information throughout the entire shipping process, providing complete visibility and traceability over shipments anywhere in your supply chain. As a result, they can proactively address late deliveries and send customized emails to end customers, internal sales teams and logistics coordinators.

Value

XPS delivers value throughout the outbound packing and shipping process in both improved operational efficiencies and cost reduction. Internal efficiencies can be realized by reducing bottlenecks, increasing throughput, providing the exact same process for the end user regardless of the carrier or service and making the tracking information available within SAP. From a customer service perspective, improvements can be seen in providing freight estimates at the time of order, address validation, custom email alerts and POD with signature image.

Cost Savings

Freight cost reductions can be realized through real-time rate shopping, by carrier and mode. XPS supports days in transit calculations for comparisons between ground or air, Parcel or LTL, in addition to automated rate shopping across carriers. The solution also includes customizable routing guides to help ensure the optimal cost and service level for each shipment.

“SCT’s XPS shipping solution gave us an ROI of 100K in just three months!”

– Paul Gall, Corporate Director of Logistics, **VIRCO**

About SCT Software

SCT Software is a leading provider of innovative logistics execution software servicing the SAP® user community. SCT software solutions are used globally by manufacturers and distributors to streamline the logistics process. The company’s products give customers increased visibility ensuring supply chain efficiency. Using SCT solutions, customers gain a competitive edge by reducing overall operational cost, improving customer service levels and increasing profitability. Focused exclusively on complementing SAP® logistics capabilities, SCT solutions enable customers to leverage the investment in their SAP® landscape while providing best-of-breed functionality.
